

Description of CSM 9

Wall Mounted - Straight Line:

This is another common type of chimney which has a flat top with a pipe to remove the fumes. They are fixed on a wall.

Materials Used

The SKHD 600 PC features a black-coloured powder-coated body that is built for long-lasting usage in any kitchen. It is also easy to clean and maintain. We know that vapours are grimy and stick to the surface of the chimney, so they have made the surface as easy to clean as possible.

Buttons & Controls

The SKHD 600 PC Chimney is equipped with push buttons for easy control of your chimney. The control push buttons help you to operate the speed and fan of the chimney. Being functional and ergonomic, the chimney is true to the hallmarks Prestige is known for.

Filter

This kitchen chimney is fitted with double grease filters made of durable aluminium. Aluminium filters use mesh technology that is efficient in the capture of grease and oil particles. It is also more economic. Filters are easy to clean and replace, if necessary.

Lighting System

This kitchen chimney uses 2 lamps for good lighting. They make cooking convenient after sunset by lighting up the cooking area.

Ductless

In ductless outlets the fumes or smoke absorbed by the chimney is filtered and recycled back in the room.

Highlights

- High quality black powder coated body
- 670m³/hr. suction capacity
- 120 watts twin motors
- 2 Aluminium metal grease filters
- 2 Lamps for illumination

Specifications:
